City of Topeka

Project Building Address:

Project & Building Description:

WE CERTIFY with acceptance of this submittal as our confirmation, the manufacturer's components of the subject building are designed in accordance with Chapter 16 - Structural Design and Chapter 22 - Steel, Chapter 23 – Wood of the 2015 International Building Code (2015 IBC) and local amendments of the Topeka Municipal Code – City of Topeka Chapter 14.

All structural load-carrying members are designed to carry loads per these requirements as well as the following minimums specified in Chapter 14 of the City Code of Topeka by adoption of the 2015 IBC & local amendments:

- 20 pounds per square foot roof snow load of f horizontal projection / non-reducible
- 115 mile per hour wind load with Exposure B – 2015 IBC Section 1609
- Seismic Zone Classification – 2015 IBC Section 1613 – specific to site class

WE FURTHER CERTIFY:

No snow load reductions have been taken due to tributary area or exposure to wind. Greater snow loads have been considered at locations of potential accumulation such as valleys, parapets, supplemental roof structures, offsets, etc. Combinations of loads were considered as required in the 2015 IBC.

The building components, when properly erected on a structurally compliant foundation system, in accordance with the fabrication and erection drawings as furnished, will meet the design loading requirements for the City of Topeka and in accordance with good engineering practice.

This does not certify field modifications or design of materials not furnished by this manufacturer.
