Topeka, Kansas Bicycle and Pedestrian Documentation Data report 2013, 2014, 2015, 2016, 2017, 2018, 2019 & 2020.

In September 2013, Topeka joined with other cities nationwide in participating in annual bike counts, using a standardized National Bicycle and Pedestrian Documentation (NBPD) method developed by Alta Planning and Design and the Institute of Transportation Engineers (ITE). The basic assumptions of the methodology are that, in order to estimate existing and future bicycle and pedestrian demand and activity, agencies nationwide need to start conducting counts and surveys in a consistent manner similar to those being used by ITE and other groups for motor vehicle models. Consistency is key to the methodology, requiring consistent days and times; methods and materials; and centralized data collection and analysis practices.

This is the eighth year of doing counts. As we continue to do counts each year, we anticipate seeing trend lines and what areas are getting the most use. The information will be vital to deciding where to improve on the infrastructure.

Volunteers were trained on how to conduct screen line counts and how to fill out count forms. A screen line was established for all locations. Any bicyclists or pedestrian passing through the screen line was counted. Counts were conducted during three two-hour time slots. Dates for conducting the counts were chosen based on the National Bicycle and Pedestrian Documentation Project's recommended September count weeks. Site locations were chosen based on the methodology developed by NBPDP and included:

- Locations where new or improved bicycle or pedestrian facilities will be/have been constructed
- Along existing corridors and trails
- Locations where there are high numbers of bicycle or pedestrian collisions
- High activity corridors for bicyclists and pedestrians such as downtown, parks and near schools

Sites were endorsed by the Bicycle Advisory Committee.

One of the greatest challenges facing the bicycle and pedestrian field is the lack of documentation on usage and demand. Without accurate and consistent demand and usage figures, it is difficult to measure the positive benefits of investments in these modes, especially when compared to the other transportation modes such as the private automobile.
