METROPOLITAN TOPEKA PLANNING ORGANIZATION

TOPEKA, KANSAS

TRANSPORTATION IMPROVEMENT PROGRAM

FEDERAL FISCAL YEARS 2021-2024

The Metropolitan Topeka Planning Organization (MTPO) Staff prepared the Transportation Improvement Program (TIP) with assistance and cooperation from the following agencies:

Federal Highway Administration (FHA) Federal Transit Administration (FTA) Kansas Department of Transportation (KDOT) Shawnee County, Department of Public Works City of Topeka, Department of Public Works Topeka Metropolitan Transit Authority (TMTA) Topeka/Shawnee County Paratransit Council

An electronic copy of this document and any subsequent amendments to it may be downloaded from the MTPO section of the Topeka website at <u>http://www.topekampo.org/</u>.

A paper copy of this document is available at the address below:

Metropolitan Topeka Planning Organization Topeka Planning Department 620 SE Madison – Unit #11, 3rd floor Topeka, KS 66607 (785) 368-3728

Approved 10/29/2020

The preparation of this report has been financed in part through grant(s) from the Federal Highway Administration and Federal Transit Administration, U.S. Department of Transportation, under the State Planning and Research Program, Section 505 [or Metropolitan Planning Program, Section 104(f)] of Title 23, U.S. Code. The contents of this report do not necessarily reflect the official views or policy of the U.S. Department of Transportation.

Metropolitan Topeka Planning Organization

Introduction

The Transportation Improvement Program (TIP) is a short-range program that identifies transportation projects to be implemented in the Topeka Metropolitan Area during the next four years. It is developed in accordance with the Continuing, Cooperative and Comprehensive (3-C) Process and includes all projects that use federal funds and/or are regionally significant. The TIP is one of many tools used to implement the goals and objectives of the Metropolitan Transportation Plan (MTP) and documents the transportation priorities and financial resources available for the region. The TIP must be fiscally constrained all four years, identifying federal, state, and local funding sources expected to be available to fund the proposed projects.

<u>Fixing America's Surface Transportation Act (FAST-Act) – Changes to the MPO Planning</u> <u>Process</u>

In December 2015, the President signed the Fixing America's Surface Transportation Act (FAST-Act into law. This transportation bill kept intact many of the planning provisions of the previous transportation bill, Moving Ahead for Progress in the 21st Century (MAP-21) with emphasis placed on performance management in both statewide planning and metropolitan planning. This bill included 5 years of long-term funding from 2016 through 2020, totaling over \$305 billion dollars. As of the publishing of this TIP, the FAST-Act legislation remains the current Transportation Bill.

The programs covered under this bill include:

- Highway
- Motor vehicle safety
- Public transportation
- Motor carrier safety
- Hazardous materials safety
- Rail, and
- Research, technology, and statistics

Funding breakdowns by category and changes:

Public Transit

- \$72 Billion nationally over 5 years
- \$55 million in Kansas over 5 years (\$11m annually)
- Re-established a Bus Discretionary Program
- \$55 million has been designated for Low- or No- Emission Bus Deployment projects.

MPO Planning

- PL funding will increase 2% annually
- Program Changes
 - TIPs should consider intercity bus operations
- MPO's are encouraged to include or consult on the following issues:
 - Natural disaster risk reduction
 - Reduction or mitigation of storm water impacts
 - Enhance travel and tourism

Transportation Alternatives

- Referred to as Surface Transportation Block Grant Set-Aside
- Program Changes
 - MPO's with >200,000 population may flex 50%
 - MPO's must distribute funds "in consultation with state"
 - Non-Profit Organizations are not eligible sponsors (cannot apply themselves but can be a partner)

Surface Transportation

- Surface Transportation Block Grant Program
- Continual increase in funds over the course of the FAST Act (2.3% Annually)
- New eligible costs include SRTS, Workforce Development, and Intermodal

The Eisenhower Legacy (IKE) Transportation Grant

Approved in 2019 continued in 2020

• In the first round, \$74 million in transportation projects (both preservation and expansion) was awarded. Thirty-nine (39) million dollars of this was state funding. Projects will be added to the pipeline annually.

The KDOT Innovative Technology Program

Established through the Cost Share Program

• \$3 million awarded annually, no project receives more than \$1 million per cycle.

The KDOT Cost Share Program

The KDOT Cost Share program (provides financial assistance to local entities for construction projects that improve safety, leverage state funds to increase total transportation investment and help both rural and urban areas of the state improve the transportation system.

• Applications accepted twice annually. \$5.5 million available during 2020 Fall application process

Purpose & Definition of the TIP Policy

This policy describes the TIP development process, the methods to amend the TIP and provides an overview of the guidelines to be used in the development and maintenance of the TIP. The activities involved in these processes are defined here, as well as what constitutes a "regionally significant" project. Federal requirements for the development and content of the TIP are found in 23 CFR 450.324.

TIP Defined

The TIP is a multi-year listing of federally funded and regionally significant projects selected to improve the transportation network for the Metropolitan Topeka Planning Organization (MTPO) planning area. The TIP discusses multimodal development which focuses not only on motor vehicles but also transit, bicycle, rail, and pedestrian modes of transportation.

The TIP consists of at least a four-year program including: 1) all federally funded priority transportation projects, and 2) all regionally significant priority projects, regardless of funding source. The TIP must:

- Be updated at least every four years;
- Include projects that are consistent with the MTPO's Metropolitan Transportation Plan; and
- Be financially constrained and include only those projects for which funding has been identified, using current or reasonably available revenue sources.

The MTPO is responsible for developing the TIP in cooperation with local governments, transit operators, the State Department of Transportation, and federal partners, each of whom cooperatively determine their responsibilities in the planning process. The TIP must be approved by the MTPO and the Kansas Department of Transportation (KDOT), the agency which has been delegated this responsibility by the Governor. The TIP must then be amended into the Statewide Transportation Improvement Plan (STIP) by approval of the Federal Highway Administration and the Federal Transit Administration.

<u>Schedule for Making Changes to TIP Projects and Keeping the TIP Document Up to</u> <u>Date</u>

Changes to TIP projects (including additions and amendments of projects) will be processed quarterly beginning at the January MTPO Technical Advisory Committee (TAC) meeting of each year. This provision was incorporated into the amendment process to provide a more efficient TIP amendment process. However, in the event there is an amendment that requires immediate processing the MTPO staff is at liberty to circumvent the amendment schedule. The MTPO has set a schedule to update the entire TIP every two years.

TIP Amendment approval by the Policy Board in the following months:

- January 2021 (Approved by MPO on Jan. 28th: to KDOT by Feb. 1st)
- April 2021 (Approved by MPO on April 22nd: to KDOT by May 6th)
- July 2021 (Approved by MPO on June 24th:to KDOT by July 8th)
- *Sept. 2021 (Approved by MPO on August 26th: to KDOT by Sept.9th)
 *Sept. Amendment will be the last STIP Amendment for the 2021 STIP

If there is a special circumstance which requires an amendment to happen outside of the dates listed, KDOT may execute a Special STIP amendment.

TIP Development for the Topeka Metropolitan Area

Project Funding

Projects in the TIP are funded through various Federal, State, and local funding sources. The City of Topeka and Shawnee County identify projects in their respective Capital Improvement Programs (CIP) that will be funded over the next 5 years. Coordination between the City, County, KDOT, Topeka Metro Transit Authority (TMTA) and the MTPO occurs to ensure that the projects identified for funding are consistent with the MTPO's Metropolitan Transportation Plan (MTP). Assistance with determining project consistency is conducted with the help of the MTPO decision making bodies which include the Technical Advisory Committee (TAC) that makes recommendations to the MTPO Policy Board.

The primary federal funding sources for this region include Surface Transportation Program (STP) funds. Discretionary funding for transportation enhancements or special projects also becomes available from time to time to further the implementation of the region's MTP. These funds include; a) Transportation Alternatives (TA) funds, which are funds generally used for new trails, city beautification, or historic transportation projects, although other types of projects may also be eligible for TA funding; b) FHWA Highway Safety Improvement Program (HSIP) funds; c) KDOT Economic Development Projects; ; and e) National Highway Performance Program (NHPP) funds. Recent funding sources available include the Eisenhower Legacy Grant, the Innovative Technology Program, and the Cost Share Program.

Federal funding for Public Transit capital and operations is supplied through Federal Transit Administration (FTA) grants. FTA grants such as 5307, 5309 & 5310 have all been used by the Topeka Metropolitan Transit Authority. The Transit Authority uses these federal funds along with city mill levy and fare box revenues to support its operations. Paratransit providers in the MTPO Area also utilize these funds for capital expenditures and operations.

Local projects are sometimes funded through sales tax revenues earmarked for road and bridge improvements. Sales tax revenues are voted on by Shawnee County and City of Topeka voters. The amount and duration of the tax is set at that time as well. These sales tax revenue funds are programmed in the City of Topeka Capital Improvements Plan and can also be used to fund projects that are not eligible for federal funding. This funding is sometimes used as a source for matching funds for projects in the TIP.

TIP Approval Process & Fiscal Analysis

The MTPO TIP update is performed every two years. The TIP update procedure is as follows:

Basic Steps to Development and Approval of the Transportation Improvement Program (TIP)

Review any changes to TIP-related regulations and start drafting TIP text
Ţ
Solicit projects from collaborative partners
\Box
Technical Advisory Committee (TAC) and MTPO Chairperson discuss public involvement activities
\Box
MTPO sets deadline for completion of project submission forms
\Box
MTPO Staff receives and reviews project submission forms and starts drafting TIP project tables
\Box
MTPO Staff and TAC review the draft TIP for Title VI/Environmental Justice and fiscal feasibility issues
\Box
MTPO conducts public involvement activities and revises draft TIP to reflect public comments if warranted.
\Box
MTPO Staff prepares the TIP Public Hearing Draft and submits the TIP back to the TAC for recommendation to forward to PB for approval
Ţ
MTPO approves the TIP and forwards it to KDOT for review and approval
\Box
KDOT Secretary (acting as the Governor's designee) approves the TIP
\Box
KDOT forwards the TIP to the FHWA and FTA for approval prior to inclusion in the State TIP

The FHWA and the FTA must jointly find that the TIP is consistent with the MTP per CFR subsection 450.328. The MTPO and KDOT must also certify the planning process has been carried out in accordance with CFR subsection 450.332. In addition, it is required that an annual listing of obligated projects be posted in the TIP in accordance to CFR subsection 450.332

Projects in the TIP are included by reference in the Statewide Transportation Improvement Program (STIP). The STIP is the State's equivalent of a TIP, but includes all federal funded transportation projects throughout the state. KDOT sends the STIP to Federal Highway Administration (FHWA) and

Federal Transit Administration (FTA) for approval. Approval of the STIP by FHWA and FTA also serves as the TIP approval.

TIP Fiscal Analysis

First, the TIP must contain a system-level estimate of the costs and revenue sources that can be reasonably expected to be available to adequately operate and maintain the multimodal transportation system. Second, the TIP is required to use revenue and cost estimates that apply an inflation rate to reflect "year-of-expenditure" dollars.

The projects included in the TIP should also be included in the respective local government's capital improvement plans and budgets. Budgets for locally sponsored projects in the TIP are based on the best available cost estimates and reasonable projections of revenues made by the local governments in the region. Projects without identified local match will not be included in the TIP.

In addition to having a clearly identified source of funding for each project listed in the TIP, the project sponsors must also present the project costs in year of expenditure (YOE) dollars. This allows the project estimates to take into account inflation. For projects like Transportation Alternatives that require a KDOT application, the inflation factor is built into the application form and takes the current year estimate and inflates it to the year in which the funds will be available.

Fiscal constraint ensures that funds are available or can reasonably be expected to become available for the projects submitted for inclusion into the TIP. Projects listed for the City and County are submitted by their respective Public Works departments. Anticipated federal funding for the next four years for roads, bridges and enhancement projects will primarily be supplied by federal STP, HSIP and TA funds. However, it is also reasonable to assume that discretionary funds may also be granted in some years covering this four-year period. Federal funding for public transit and paratransit operations will generally be derived through transit urban and rural formula programs such as, FTA 5307 funds, and Section 5309 discretionary capital funds. Based on these anticipated federal funding sources, the obligated annual (O.A.) funds for roads, bridges and enhancements are estimated to be:

Туре	City	County	MTPO Total
STP (O.A.)	\$1,500,950	\$1,312,237	\$2,813,187
TA (O.A.)approx.	\$900,000	700,000	\$1,600,000
HSIP (O.A.)approx.	\$500,000	500,000	\$1,500,000
Total:			\$5,113,187

These anticipated funding sources and their respective local match are incorporated into the Funding Summary Budget Table, following the project listings in this document. Anticipated annual FTA funding is tracked in this table as well. This budget table is updated in the event of any project additions, deletions or funding changes.

Sub-allocated Federal Programs

A number of federal funding streams are dedicated by statute, or sub-allocated, to specific projects and programs within the MTPO metropolitan planning area. The table below explains current FAST-Act programs.

Table 1: Impact of FAST-Act on Planning Workflow and Programs			
Previous Sub-Allocated Program Impact			
Bridge	Projects remain eligible for STP funding.		
CMAQ	Program continued with minor changes to project eligibility.		

Table 1: Impact of FAST-Act on planning workflow and programs (Con't.)			
Previous Sub-Allocated Program	Impact		
STP	Program continued.		
Transportation Alternatives	Program continued.		
Job Access Reverse Commute (JARC)	Combined with Section 5307 under previous Bill.		
New Freedom	Combined with Section 5310 under previous Bill.		
5310	Modified to sub-allocate some funds to large urban areas under previous Bill.		

Surface Transportation Program and Bridge Program

The Surface Transportation Program (STP) provides flexible funding that may be used by states and localities for projects on any federally-aided highway, including the National Highway System, bridge projects on any public road, transit capital projects, and intra-city and inter-city bus terminals and facilities. STP funds are divided into a various subcategories using a formula based on population. The largest subcategory is for funds sub-allocated for Transportation Management Areas (TMAs) with populations greater than 200,000. STP funds are allocated by six categories:

- 1. Bridge restoration and rehabilitation.
- 2. Bicycle and pedestrian, livable communities, pilot projects and other.
- 3. Public transportation.
- 4. Roadway capacity.
- 5. Transportation operations and management.
- 6. Transportation safety.

Transportation Alternatives Program

The Transportation Alternatives Program (TA) provides for a variety of alternative transportation projects that were previously eligible activities under separately funded programs such as Transportation Enhancements and Safe Routes to School. The program supports projects that expand travel choices and enhance the transportation experiences through improvements to the cultural, aesthetic, historic and environmental aspects of the transportation network. Eligible activities include bicycle and pedestrian accommodation, safe routes to school programs and recreational trails.

Federal Transit Administration Programs

Section 5307 Formula Grant

Section 5307 (49 U.S.C. § 5307) is a formula grant program for urbanized areas providing capital, operating, and planning assistance for mass transportation. This program was initiated by the Surface Transportation Act of 1982 and became FTA's primary transit assistance program in fiscal year (FY) 1984. Funds are apportioned to urbanized areas utilizing a formula based on population, population density, and other factors associated with transit service and ridership. Section 5307 is funded from both General Revenues and Trust Funds.

Section 5307 urbanized area formula funds are available for public transit improvements for 34 urbanized areas over 1 million population, 91 urbanized areas with populations between 200,000 and 1 million, and 283 urbanized areas between 50,000 and 200,000 population. For urbanized areas over 200,000 in population, funds flow directly to the designated recipient. For areas under 200,000, the funds are apportioned to the Governor of each state for distribution.

Section 5310 Formula Grant

Section 5310 Capital Assistance Program provides funds to support transport of elderly and/or disabled persons where public transportation services are unavailable, insufficient or inappropriate, by incorporating the former New Freedom program and establishing a direct sub-allocation of funding to large urbanized areas with populations greater than 200,000.

A locally developed, coordinated public transit-human services transportation plan must include projects selected for funding. A competitive selection process, previously required under the New Freedom program, is now optional. At least 55 percent of program funds must be spent on public transportation projects planned, designed and carried out to meet the special needs of seniors and individuals with disabilities when used for public transportation projects that exceed the requirements of the ADA. Such public transportation projects include those that improve access to fixed-route service and decrease reliance by individuals with disabilities on complementary paratransit or alternatives to public transportation that assist seniors and individuals with disabilities. These funds require a 50 percent local match when used for operating expenses. A 20 percent local match is required when using these funds for capital expenses, including acquisition of public transportation services.

Section 5311 Formula Grant

Section 5311 Formula Grants are designated for rural areas. This program provides capital, planning, and operating assistance to states to support public transportation in rural area with populations of less than 50,000, where many residents often rely on public transit to reach their destinations. The program also provides funding for state and national training and technical assistance through the Rural Transportation Assistance Program.

Eligible recipients include states and federally recognized Indian Tribes. Sub recipients may include state or local government authorities, nonprofit organizations, and operators of public transportation or intercity bus service. Eligible activities include planning, capital, operating, job access and reverse commute projects, and the acquisition of public transportation services.

The federal share of funding is 80 percent for capital projects. 50 percent for operating assistance. and 80 percent for Americans with Disabilities Act (ADA) non-fixed route paratransit service projects. Section 5311 funds are available to the States during the fiscal vear of apportionment plus two additional vears (total of three vears). Funds are apportioned to States based on a formula that includes land area. population. revenue vehicle miles. and low-income individuals in rural areas. In addition, each state must spend no less than 15 percent of its annual apportionment for the development and support of intercity bus transportation, unless it can certify, after consultation with intercity bus service providers, that the intercity bus needs of the state are being adequately met.

Highway Safety Improvement Program (HSIP)

The Highway Safety Improvement Program (HSIP) is a core federal-aid program. The goal of the program is to achieve a significant reduction in traffic fatalities and serious injuries on all public roads, including non-State-owned public roads and roads on tribal lands. The HSIP requires a data-driven, strategic approach to improving highway safety on all public roads that focuses on performance.

The specific provisions pertaining to the HSIP were defined in Section 1112 of MAP-21, which amended Section 148 of Title 23, *United States Code* (23 USC 148). Some program highlights include:

- Each State must develop, evaluate and update a state-wide Strategic Highway Safety Plan on a regular basis.
- The High Risk Rural Roads (HRRR) Special Rule requires States to obligate funding on HRRRs if the fatality rate is increasing on rural roads.
- The annual reports from the States will be posted on FHWA's website.
- FHWA is required to establish measures for the States to use in assessing the number and rate of fatalities and serious injuries.

Advance Construction

State and local governments use a federal funding tool called "advance construction" to maximize the receipt of federal funds and provide greater flexibility and efficiency in matching federal aid categories to individual projects. Advance construction (AC) is an innovative funding technique that allows project sponsors to initiate a project using non-federal funds while preserving eligibility for future federal aid. With AC, the Federal Highway Administration (FHWA) determines eligibility for federal aid but does not actually commit present or future federal aid to the project. Project sponsors may convert the project to regular federal aid, provided that federal aid is available for the project. AC does not provide additional federal funding- it simply allows project sponsors to construct projects with state or local money but seek federal reimbursement in the future. Projects using AC are included in the project listing of the 2021-2024 TIP and are accounted for in the financial summary.

Complete Streets

In September 2012, the MTPO approved a Complete Street Policy in support of the region's vision for a safe, balanced, multi-modal and equitable transportation system that is coordinated with land-use planning and protective of the environment. This policy guides and informs the MTPO's planning and programming work. Complete streets are streets, highways and bridges that are routinely planned, designed, operated and maintained with the consideration of the needs and safety of all travelers along and across the entire public right-of-way. This includes people of all ages and abilities who are walking; driving vehicles such as cars, trucks, motorcycles or buses; bicycling; using transit or mobility aids and freight shippers.

The MTPO's programming processes for sub-allocated funding include consideration of Complete Streets policy requirements during the application and evaluation of each project. The policy recognizes that every street may not be suitable for Complete Street implementation, and exceptions will be considered on a case by case basis. In 2018, the MTPO, in conjunction with Toole Design Group, completed a Complete Streets Guidelines Manual for the MTPO area.

Adequate Operating & Maintenance Funds

The TIP requires written confirmation stating each participating government will have the necessary operating funding to provide the service proposed and operate existing and proposed federally-funded assets appropriately. These operating funds may come from state, county or local sources. The metropolitan planning statutes state the Metropolitan Transportation Plan (MTP) and the TIP must include a "financial plan" that "indicates resources from public and private sources that are reasonably expected to be available to carry out the program."

Given the information provided from the jurisdictions on their assets, it is the assumption of the MTPO that there is adequate funding available for operations and maintenance. The data table below outlines each government within the MTPO area and their known federally funded assets:

Unit of Government*	Lane Miles	# of Bridges	Budget Totals	Cost per lane mile.
KDOT**	457	131	\$1,670,000 Annual; \$6,680,000 4yr.	\$3,654
City of Topeka	800 (Arterials & Collectors)	103	\$7,500,000 Annual; \$30,000,000 4yr.	\$9,375
Shawnee CO.	531	255	\$8,846,515 Annual; \$35,386,060 4yr.	\$16,660
Topeka Metro (TMTA)			\$8,343,073 Annual; \$33,372,294 4yr.	

Expenditures will likely increase with increased cost of materials and fuel.

*Maintenance costs include salaries, fringe benefits, materials and equipment needed to deliver the roadway and bridge maintenance programs. This category includes basic maintenance activities like minor surface treatments such as: sealing, small concrete repairs and pothole patching, mowing right-of-way, snow removal, replacing signs, striping, repairing guardrails, and repairing traffic signals. Performing these activities requires employees, vehicles and other machinery, facilities to house equipment and materials such as salt, asphalt and fuel.

**Statewide Budget

Maintenance Funding Sources

City maintenance costs will come mainly from General Obligation (G.O.) bonds, fuel tax and a ½ cent sales tax* that was recently approved by voters. This half-cent sales tax is a 10-year tax which is earmarked for street maintenance and improvement projects, engineering & design, maintenance materials/curb & gutter, ADA ramps, alley repair, and 50/50 sidewalk repair. The tables below provide a breakdown of both the City and County approved ½ cent sales tax. The county-wide tax has earmarked funding for county projects and bridges. The approximate annual ten-year breakdowns of these sales tax revenues and expenditures are noted below:

Ci	ty ½-Cent Sales Tax	2021	2022	2023	2024
	Pavement Maintenance & Rehab. Existing Streets*	\$8,800,000	\$7,600,000	\$7,300,000	\$6,300,000
	Curbs, Gutters & Street Repair	\$1,250,000	\$1,250,000	\$1,250,000	\$1,250,000
	Street Maintenance and Repair: Local Streets*	\$2,880,000	\$2,880,000	\$2,880,000	\$2,880,000
	Street Contract Preventative Maintenance Program	\$2,000,000	\$2,000,000	\$2,000,000	\$2,000,000
	Subtotal Half-Cent Sales Tax	\$25,530,000	\$25,530,000	\$27,530,000	\$27,530,000

*Each year's projects will be reassessed and resources reallocated based on updated street conditions and needs

С	ountywide ½ -Cent Sales Tax	2021	2022	2023	2024	
	Pavement Preventative Maintenance Program	\$3,330,000	\$3,330,000	\$3,330,000	\$3,330,000	
(County maintenance funding is mainly from motor fuel tax and County wide sales tax. Transit					

funding is from city mill levies and fare box revenues.

*Citywide Half-Cent Street Sales Tax (Fix Our Streets) 2021-2025 CIP: \$66,524,098 (14%): Citywide Half-Cent Street Sales Tax (also known as the Fix Our Streets Sales Tax) is funded by a voter approved half-cent sales tax initiative. It is dedicated to street maintenance and repair and cannot be used for new street construction. The tax generates approximately \$14.7 million in annual revenue.

Countywide Half-Cent Street Sales Tax 2021-2025 CIP: \$38,752,000 (8%): The Countywide Half-Cent Street Sales Tax is funded by a voter approved half-cent sales tax initiative for economic development and countywide infrastructure development. These projects represent what is proposed to be completed with funds collected from 2017 -2031.

Federal Funds 2021-2025 CIP: \$16,825,334 (4%): Funds received from the Federal government for infrastructure and community improvement projects.

G.O. Bond 2021-2025 CIP: \$73,970,049 (16%): General Obligation (G.O.) bonds are used to finance major capital projects with an expected life of 10 or more years. A G.O. bond is secured by the City's pledge to use any legally available resources, including tax revenue, to repay bond holders. The City used a portion of the property tax levy to finance the debt service payments.

Topeka Metro Transit Authority Operating and Maintenance Funding Sources

The following table shows the annual projected operating and maintenance sources by category for the TMTA.

Revenue & Funding	Budget FY2021	Projected FY2022	Projected FY2023	Projected FY2024
Fares	1,300,000*	1,300,000	1,300,000	1,300,000
Mill Levy	5,100,000	5,200,000	5,300,000	5,400,000
KDOT	800,000	800,000	800,000	800,000
FTA	2,500,000	2,600,000	2,700,000	2,800,000
Other	400,000	400,000	400,000	400,000
Total	10,100,000	10,300,000	10,500,000	10,700,000

Topeka Metro Transit Authority (TMTA)

*2021 Fares will be suspended for p portion of 2021 and ridership will most likely be down due to the COVID-19 Pandemic therefore this estimate will be adjusted to a more accurate figure when more normalized figures can be obtained.

Project Evaluation and Selection

As part of the project selection process, the 2040 Metropolitan Transportation Plan (MTP), also referred to as Futures 2040, is referenced below to assure projects conform to the established goals set therein:

Cultivate, Maintain, and Enhance the Region's Economic Vitality.

- 1. Increase the Safety and Security of the Region's Transportation System.
- 2. Increase Accessibility and Mobility Choices in the Region.
- 3. Protect, Preserve, and Enhance the Social, Historical, and Natural Environments of the Region.
- 4. Promote Efficient System Management and Operation.
- 5. Enhance Integration and Connectivity of the Transportation System Across and Between Modes.
- 6. Emphasize Maintenance and Preservation of the Existing Transportation System.

The 2040 MTP contains a listing of projects that are both long- range and short-range priorities for the Topeka Metropolitan area. Before a project can be included in the TIP, it must first be on the MTP's List of Recommend Projects. Local governments are responsible for submitting projects in the Surface Transportation Program (STP), Transportation Alternatives (TA) and other funding categories in consultation with the MTPO and KDOT.

Performance Management & Measures

The FAST Act continues the performance- and outcome-based program established under MAP-21. The objective is to invest resources in projects that collectively make progress toward the achievement of national goals. The legislation requires the U.S. Department of Transportation (USDOT), in consultation with States, MPOs and other stakeholders, to establish performance measures in these areas:

 Safety 	 Infrastructure condition 	 Congestion reduction 	 System reliability 	•
Freight m	ovement and economic vital	ity		

Relationship to the Futures 2040 Plan Goals

The TIP and other plans are required to include information regarding performance measures. Performance measures and targets have now been set at the State level and are now required to be carried out at the metropolitan planning levels. The MTPO's MTP, Futures 2040, addresses performance measures and goals in the required emphasis areas described above. Targets set forth in this TIP will serve as the gauge for measuring the MTPO's progress toward fulfilling those goals.

Futures 2040 Goals and Objectives

Based on federal goals, public input, and an analysis of other transportation plans in the region, including the last MTPO MTP, five general goals emerged to guide decision-making for the Futures 2040 Plan. Generally, the goals match or include all eight federal goal areas and follow the general themes heard throughout the public engagement process. To assure that these goals are being met, several performance measures were also selected to determine progress. These goals are deliberately simpler than goals in past plans, making them easier to communicate with the public and better to resonate with the public's general concerns. In order of importance, the Future 2040 goals are:

- 1. Maintain Existing Infrastructure
- 2. Improve Mobility and Access
- 3. Increase Safety for All Modes of Transportation
- 4. Enhance Quality of Life
- 5. Promote Economic Development

Performance Measures (1): Safety – Goal: Increase Safety for All Modes.

The FAST-ACT requires states to have a safety data system for analyses that support the Strategic Highway Safety Plan and the Highway Safety Improvement Program. States must use the safety data systems to identify fatalities and serious injuries on all public roads by location and identify location and roadway elements that pose dangers to all road users, including vehicle occupants and non-occupant roadway users (e.g. pedestrians and bicyclists) [23 U.S.C. 148 (c) (2)(B)(i) and (iii)]. Each MPO is required to establish performance targets for each of the federally required performance measures to use in tracking progress toward attainment of critical outcomes for the MPO region. [23CFR 450.306(d)(2)(i).

It is the long-range goal of the MTPO to reduce traffic fatalities within the MPO area. The MTPO will be researching safety strategies which will encompass education, enforcement, engineering and emergency response. Our actions will include targeted intersection safety improvements and varied education and enforcement efforts. The MTPO will also explore avenues to coordinate with its MPO planning partners to incorporate methods of improving safety for bicyclists, pedestrians, and motorcyclists, through a combination of education, engineering and enforcement. While the MTPO adopted a Transportation Safety Plan in 2019, which suggest Safety PM's, provisions for tracking those measures had to be put on hold due to complications of COVID-19, which prevented the hiring of consultants to assist in this endeavor.

Therefore, the MTPO will continue to adopt and support the safety goals set forth by the Kansas Department of Transportation (KDOT) until such time that the MTPO is able to work with a consultant on tracking the Safety PM's outlined in the MTPO Transportation safety Plan. The process will generally include 5 steps:

- Goal/Objectives
- Performance Measures
- Target Setting (evaluate programs and projects)
- Allocate Resources (Budget & staff)
- Measure & Report Results (Actual Performance achieved)

Achieving the best level of performance with this process depends on several factors:

- Consistency in, and understanding of, goals, objectives, performance measures, and targets;
- High-quality data to support performance management decisions;
- The ability of managers and the availability of analytic tools to identify performance impacts of projects realistically and efficiently; and
- The ability to use performance information to make viable improvements in the transportation project selection and evaluation.

Measure	2018 Projection	Initial % below Projection	2022 HSP/HSIP Target
Number of Fatalities (FARS)	364	0%	364
Number of Serious Injuries (KCARS)	1202	1%	1190
Serious Injury Rate (KCARS/FHWA)	3.851	2%	3.774
Fatalities/VMT (FARS/FHWA)	1.17	1%	1.16
Non-Motorized (FARS/KCARS)	139	1%	138

The State's Safety targets that the MTPO will also adhere are as follows:

The MTPO will plan and program projects to assist in achieving these State numeric targets, coordinating with both the State and public transportation providers to ensure that the targets set are consistent as much as is practical. The information contained in the above table represents 5-year averages. All Potential Safety Factors to be considered with respect to TIP project evaluations to improve the safety of the transportation system component networks include:

- Number of fatalities on roadways.
- Rate of fatalities on roadways.
- Number of serious injuries on roadways.
- Rate of serious injuries on roadways.
- Number of bicycle fatalities.
- Number of railroad fatalities.
- Number of pedestrian fatalities.
- Number of drivers under the age of 21 involved in fatal crashes.
- Number of drivers over the age of 75 involved in fatal crashes.
- Number of fatalities in crashes involving blood alcohol levels of .08 or higher.

<u>Performance Measures (2): Infrastructure-Pavement & Bridge Conditions: Goal-</u> <u>Maintain Existing Infrastructure</u>

A quality transportation network ensures efficient performance and reliability in moving users from place to place. A system that is not well maintained can pose barriers to performance and safety. The Futures 2040 Plan (MTP) supports maintaining the good condition of the region's transportation infrastructure to improve performance and avoid higher maintenance costs associated with deterioration.

In 2012, the MTPO adopted the 2040 MTP which continued the long-standing practice of identifying roadways needing additional mainline capacity and new major thoroughfares needing to be built.

Much of the region's transportation dollars were allocated to building new roads and widening existing roads.

The classification of this performance measure is based on National Bridge Inventory (NBI) condition ratings for their deck (riding surface-item 58), superstructure (supports immediately beneath the driving surface- item 59), substructure (foundation and supporting posts and piers-item 60) and culvert (item 62). Condition is determined by the lowest rating of deck, superstructure, substructure or culvert. If the lowest rating is greater than or equal to 7, the bridge is classified as good; if it is less than or equal to 4, the classification is poor. Bridges rated below 7 but above 4 will be classified as fair; there is no related performance measure.

State Highways: Highway pavement conditions are monitored in the spring of each year, for both interstate highways, and non-interstate highways. Targets have been established by the KDOT for the percent of pavement in good condition: 65% for interstate highways and 55% for non-interstate highways. Figures 2-1 thru 2-4 display the performance data and targets chosen for the Metropolitan Planning Area (MPA) for the years 2018 and 2024. Both "Good" and "Poor" pavement conditions are recorded and monitored. The state highway uses the International Roughness Index (IRI) standards for rating interstate and the condition of non-interstate highwavs: file:///E:/Performanc%20Measures/Acceptable%20International%20Roughness%20Index%20Thresholds%20bas ed%20on%20Present%20Serviceability%20Rating.html

Figure 2-1

Figure 2-2

Figure 2-3

Figure 2-4

City Streets: In 2016, Topeka completed the inspection and evaluation of all city streets as the first phases of a pavement management program process. A Pavement Condition Index (PCI) score (rating scale 0-100) was determined for each street's condition based on surface condition distresses. The PCI scale provides an objective and rational basis for determining maintenance and repair needs and priorities.

Accurate and timely data on pavement condition is used to assess system performance and deterioration, identify maintenance and reconstruction needs and determine financial needs.

PCI is a rating scale that measures the condition of pavements through systematic measurement of surface distresses, like cracking, rutting, joint failure, roughness, oxidation and other factors, much the same as the state highway process. The PCI scale ranges from 0 -100 and is an indicator of the maintenance strategy needed. The PCI is grouped into five categories corresponding to the most cost-effective maintenance strategies:

- **Good (PCI 85-100):** Pavement has minor or no distresses and requires only routine preventative maintenance.
- Satisfactory (PCI 70-84): Pavement has scattered, low- severity distresses that need only routine preventative maintenance.
- Fair (PCI 55-69): Pavement has a combination of generally low-and medium-severity distresses. Maintenance needs are minor to major rehabilitation.
- **Poor (PCI 40-54):** Pavement has low-, medium- and high-severity distresses. Near-term maintenance and repair needs may range from rehabilitation up to reconstruction.
- Very poor (PCI 25-39): Pavement has predominantly medium- and high-severity distresses that require considerable maintenance. Near-term maintenance and repair needs will be intensive in nature, requiring major rehabilitation and reconstruction.

2018 PCI data revealed that the average PCI score for functionally classified streets in Topeka is approximately 60, about the mid-range of the "Fair" category. The average PCI for all city streets was 57.7. Topeka has committed to investing an average of \$24 million annually over the next 10 years to improve this score of all streets. Figure 2.5 shows the current PCI scores and lane miles for the City of Topeka's functionally classified (FC) streets.

Figure 2-5: Pavement Condition for City Streets

Street Type	Average PCI	Lane Miles	% of FC Street Network	Weighted Avg. PCI
Principal Arterials	65.5	38.8	6.7%	4.38
Minor Arterials	62.7	368.2	63.4%	39.75
Collectors	51.5	173.8	29.9%	<u>15.41</u>
Total:		570.8		59.54

As of 2020, the average PCI for all City Streets is 64.1, up from a rating of 57.7 in 2018.

County Pavement Condition: There are 142 miles of functionally classified roads in the MPA for which performance measures are applied (there are 287.5 county lane miles in total). Based on KDOT's pavement ratings, 121 miles (85%) are in "Good" condition, with 21 miles (15%) rated as "Fair". The County annually inspects roadway conditions in the spring.

The County relies on an in-house pavement evaluation process known as the Pavement Surface Evaluation and Rating (PASER) method. This method was developed by the University of Wisconsin-Madison Transportation Information Center and is used in conjunction with an internal spreadsheet/database. This pavement management system is simple and expedient in its method of evaluation and, since it has been developed internally, can be implemented at no cost (with the exception of labor and travel costs to conduct the inspections).

Figure 2-6 shows the PASER 1-10 rating scale and how the ratings are related to needed maintenance. This rating is separate from the KDOT attributed ratings used for performance measure purposes. The County's goal is to maintain all pavements such that a rating of at least 6 (good condition) is achieved. Roads with a rating equal to or less than 5 receive treatment.

Figure 2-6: PASER ratings related to needed maintenance or repair:

- 1 (Failed) Total Reconstruction
- 2 (Very Poor) Reconstruct
- **3 (Poor) Patching**, Mill & Overlay
- 4 (Fair) Overlay
- **5** (Fair) Thin Overlay or Chip/Seal
- 6 (Good) Chip/Seal
- 7 (Very Good) Crack Sealing
- 8 (Very Good) Little Maintenance Required
- 9 (Excellent) Like New No Maintenance Required

• **10 (Excellent)** New Construction – No Maintenance Required

On an annual basis, typically during the February-April timeframe, Shawnee County Department of Public Works (SCDPW) staff will drive all of Shawnee County's roads and assign each roadway segment a PCI rating of 1-10, as listed above. The individual PCI ratings for each roadway segment will be integrated into a spreadsheet and depicted graphically on a roadway system map.

Depending upon the PCI rating and the roadway surface type, a Remaining Service Life (RSL) value, in years, will be assigned for each roadway segment. A sum of all of the roadway segment RSL values will be tabulated and then divided by the total number of roadway miles (287.5) to determine an overall "Roadway Network Health" number (e.g., if the sum of all of the individual roadway segment RSL values was 2,160 years, the resulting Roadway Network Health number would be 7.5 years, i.e., 2,160/287.5)

An estimated cost of maintenance/repair per mile will be assigned to each rating value listed above. For example, a roadway having a condition of 8 may have an estimated cost of maintenance of \$1,000/mile while a roadway segment having a condition rating of 1-2 may have a cost of repair totaling \$125,000-\$500,000/mile, or more, depending on the type of roadway (i.e., rural section or urban section, and surface type).

It is the current goal of SCDPW to maintain a minimum PCI rating of 6 for each mile of Shawnee County's roadway system. SCDPW will work toward and maintain a minimum average Roadway Network Health number of 7.75 annually (average RSL of 10 for asphalt-paved roads and average RSL of 5 for chip/seal roads).

By utilizing the Pavement Management System, the MTPO will be able to easily identify and compare each roadway segment's condition. This will assist SCDPW in planning where and how to spend its budgeted allotment for road maintenance in the most cost-effective manner to maintain or increase the overall health of the roadway network.

STRATEGY:

Continue current levels of funding to maintain highway, City and County functionally classed road pavements beyond 2019, with frequent monitoring of the process.

Target Pavement Conditions:

2022 Target for Interstate Highways 70% (Good): 2% (Poor) 2022 Target for Non-Interstate Highways 55% (Good): 8% (Poor) 2022 City Streets Target: Average PCI Target for all roads: 60 2022 County Roads Target: Increase "Good" roads in the MPA to 90%

Bridge Conditions: In accordance with state and federal requirements, KDOT, Kansas Turnpike Authority (KTA), Shawnee County and the City of Topeka conducts biennial inspections of the bridge inventory for load capacity and maintenance needs. This includes looking at the condition of the bridge deck (riding surface), super structure (supports immediately beneath the driving surface), and substructure (foundation and supporting posts and piers). Based upon this evaluation, bridges are assigned an overall sufficiency rating. A capital improvement program for new bridge construction and major rehabilitation is then developed and administered.

Figure 2-7 shows the number of bridges in Good, Fair, and Poor Condition in Topeka, Shawnee County (outside Topeka), on state highways, and on the Kansas Turnpike.

Total Bridges Good Condition Fair Condition Poor Condition

Source: Kansas Dept. of Transportation

Overall, 62.3% of the total bridges are in Good Condition, 34.1% are in Fair Condition, and 3.6% are in poor condition. Shawnee County has the lowest percentage of bridges in good condition (52.8%), followed by Topeka (54.5%). Meanwhile, KDOT and KTA have 77.9% and 78.9% bridges in good condition, respectively. Shawnee County also has the highest percent of bridges in poor condition (6.3%) followed by KTA (5.3%) and Topeka (2.0%).

Figure 2-8 shows the number of Structurally Deficient, Functionally Obsolete, and Not Deficient bridges in Topeka, Shawnee County (outside Topeka), on state highways (KDOT), and on the Kansas Turnpike. Definitions for these are as follows:

- Structurally Deficient: Means there are elements of the bridge that need to be monitored and/or repaired. The fact that a bridge is "structurally deficient" does not imply that it is likely to collapse or that it is unsafe. A "deficient" bridge typically requires maintenance and repair and eventual rehabilitation or replacement to address deficiencies.
- Functionally Obsolete: Means a bridge was built to standards that are not used today. These bridges are not automatically rated as structurally deficient, nor are they inherently unsafe. Functionally obsolete bridges are those that do not meet current standards for lane widths, shoulder widths, or vertical clearances to serve current traffic demand, or those that may be occasionally flooded.
- Not Deficient: Means that a bridge meets current safety standards.

For the 2040 Metropolitan Transportation Plan update, ratings were available for state highway and non-state bridges. Of the 554 bridges, 71 (12.8%) were functionally obsolete and 22 (4.0%) were structurally deficient. Progress is being made to improve the overall condition of bridges in the region, as 44 bridges were noted as structurally deficient the previous plan.

Figure 2-8: Bridge Deficiency

Source: Kansas Dept. of Transportation

The MTPO will be adopting the state performance goals and following targets with consideration of the current status of Shawnee County Bridges:

O Target 2022 Bridge MTPO Area Conditions: -Overall Target: 65% (Good) 3% (Poor)

Performance Measures (3): Freight & Economic Vitality- Goal: Improve Mobility

The increasing economic competitiveness among regions within the United States and globalization of the economy has amplified the importance of a metropolitan freight transportation infrastructure. The deregulation of freight transportation dramatically changed business practices and created new competitive opportunities across modes. The changing nature of business practices, with an emphasis on reliable, just-in-time delivery, places a premium on the efficient operation of the freight transportation system. At the same time, the safe and efficient movement of goods increases the burden on the regional infrastructure making maintenance and safety a priority.

Comments from local businesses suggest their primary concern is maintaining the existing transportation infrastructure to support the safe and efficient movement of goods within and through the region.

Globalization of the economy has also changed the transportation and service requirements of shippers, and receivers. Manufacturers can serve markets globally, but this requires a greater reliance on, and greater efficiencies in, the transportation system. The following section highlights the current trucking freight transportation environment within the region.

Truck Flows: I-70 is the major freight highway in the Metropolitan Topeka Region. The FHWA Freight Performance Measurement, Travel Time in Freight-Significant Corridors report, notes that I-70 runs a total of 2,153 miles connecting ten states through the midsection of the continental United States from

Cove Fort, Utah to Baltimore, Maryland. I-70 passes through Denver, CO; Topeka, KS; Kansas City and St. Louis, MO; Indianapolis, IN; Dayton and Columbus, OH; Wheeling, WV; and Hagerstown and Frederick, MD. The western half of I-70, including Topeka, is overwhelmingly rural except for Denver. By contrast, the eastern half, stretching from Kansas City to Baltimore, has more closely spaced urban areas and is part of a relatively dense network of interstates and other major highways. Here traffic volumes and problems caused by intersecting highways are more likely to slow trucks. The stretch of I-70 between Denver and Kansas City, including Topeka, has none of these problems and, therefore, relatively high average truck speeds, averaging between 55 and 60 mph.

The MTP 2040 projections anticipate growth in the I-80 and I-40 corridors while I-70 is projected to see a slightly slower growth. Furthermore, I-70 west of Topeka toward Denver is not anticipated to see as significant an increase in truck volumes, as most of the growth in east-west freight movement is accommodated in the I-80 corridor.

Within Topeka and Shawnee County, I-70 carries the heaviest truck volumes. The highest truck volumes on I-70 occur between I-470 and US-75 with over 6,200 heavy commercial vehicles per day. Through downtown Topeka, over 4,400 trucks per day travel I-70; similar truck volumes are seen on I-70 east and west of Topeka. The Kansas Turnpike (I-335) south of Topeka carries 1,570 commercial vehicles per day while 1,720 trucks per day travel US-75 north of Topeka.

Congestion on the highway routes used by commercial vehicles is minor and limited to the peak hour (commuting) periods of the day. Travel time reliability is not an issue for the Topeka Metropolitan Area. See Figure 3-1 for congestion within Topeka's highways.

Figure 3-1: Freight Movement on Topeka's Interstate and other Highways

Travel Time Reliability Index (TTTR): Freight movement will be assessed by the Travel Time Reliability Index (TTTR). Reporting is divided into five periods: morning peak (6-10 a.m.), midday (10 a.m.-4 p.m.) and afternoon peak (4-8 p.m.) Mondays through Fridays; weekends (6 a.m.-8 p.m.); and overnights for all days (8 p.m.-6 a.m.). The TTTR ratio will be generated by dividing the 95th percentile time by the normal time (50th percentile) for each segment. The TTTR Index is generated by multiplying each segment's largest ratio of the five periods by its length, then dividing the sum of all length-weighted segments by the total length of Interstate. Figures 3-2 below shows the 2016 and 2017 State TTTRI numbers and future targets.

Level of Travel Time Reliability (LOTTR): In addition to TTRI for freight, utilized for interstate/noninterstate measures, the State also measures a general Level of Travel Time Reliability (LOTTR). LOTTR represents the percent of person-miles traveled that are reliable, irrespective of mode of transportation utilized. In short, it is the level of travel time reliability for each time period and reporting segment on the interstate system, and on the non-interstate highway system. Whereas the TTTR uses the 50th and 95th percentile times, the LOTTR utilizes the 80th and 50th percentile times. The time periods for LOTTR are: Mon-Fri.: (6-10am; 10am-4pm; 4pm-8pm and 6am-8pm on weekends) The threshold for the LOTTR ratio is 1.5. Any ratios that are above 1.5 are considered "Not Reliable". While there is no threshold for the TTRI, the sum of all segments in each time frame must not exceed 1.5. The target percentage for the LOTTR represents the percent of the interstate/non-Interstate system person-miles that ARE reliable. State DOTs and MPOs will have the data they need in FHWA's National Performance Management Research Data Set (NPMRDS), which includes truck travel times for the full interstate system. State DOTs and MPOs may use an equivalent data set if they prefer. Figures 3-3 and 3-4 below show the 2016 and 2017 State LOTTR numbers and future targets. The MTPO will be supporting these targets.

Figure 3-2: State Travel Time Reliability Index and Targets

Figure 3-3 Interstate Percentage of Person-Miles that are Reliable

Figure 3-4 Non-Interstate Percentage of Person-Miles that are Reliable

In the future, more significant congestion will begin to develop along I-70, especially between I-470 and US-75, as well as near downtown. A more detailed study for the area along I-70 between I-470 and US-75, including US-75 north across the Kansas River, is needed to determine recommended actions. The I-70 Polk-Quincy Viaduct Corridor project, when constructed, will address future congestion near downtown.

2022 Travel time & Congestion Target: Adopting State Target: TTTRI 1.16: LOTTR 95% for both Interstate and Non-Interstate

Performance Measures (4): Congestion Reduction/Modes-Active Transportation (Bike-Pedestrian)- Goal: Community Health & Wellness-Enhance Quality of Life Topeka Bikeways Master Plan

In 2012 the MPTO adopted the Topeka Bikeways Master Plan which outlines a five-phase plan for the city to establish bike lanes on specific routes and develop a Topeka Bikeway System over a 15-year period. Built of eight trails and 25 "routes", **Topeka's Bikeways Plan sought to accomplish six goals**:

- 1. Increase the number of people who use the bicycle for transportation as well as recreation. Topeka's multi-use trails are well-utilized and provide transportation, but they are largely used for recreation. Increasing the percentage of trips for other purposes would indicate success.
- 2. Improve bicycle access to key community destinations. A bicycle transportation system should get people comfortably and safely to where they want to go. Topeka's system is destination-based, providing clear and direct connections to key community features.
- 3. *Improve access to the city's pathway system by connecting trails to neighborhoods.* Topeka's trails serve most bicycle trips, but the city's emerging trail system can connect to more neighborhoods using streets and other development opportunities as linkages.
- 4. Use bicycling to make Topeka more sustainable. Bicycling promotes sustainability at three levels. Globally, bicycle travel reduces fossil fuel use and greenhouse gas emissions. Community-wide, bicycle transportation systems can decrease road maintenance costs, promote a healthier environment, and build community. Individually, physical activity as a daily routine makes people healthier, reducing obesity, improving wellness, and lowering health care costs.
- 5. *Increase roadway safety for motorists, bicyclists, and pedestrians.* Good infrastructure reduces crashes and increases comfort for all users of the transportation network with research indicating that more cyclists leads to fewer bicycle crash rates. Infrastructure must be supported by education, enforcement, and encouragement, as measured by regular evaluation.

6. *Capitalize on economic development benefits of a destination-based bicycle transportation system*. Topeka has many attractive features: Brown v. Board of Education historical site, Gage Park with its zoo and Discovery Center, the Kansas History Center, the State Capitol, and distinctive commercial districts, among others. As a bicycle-friendly community, Topeka can add to visitors' experiences, attracting new residents and investment.

To measure the success of its goals and evaluate the components and effectiveness of the network, criteria were developed by the Netherlands' Centre for Research and Contract Standardization in Civil and Traffic Engineering, one of the world's leading authorities in the design of bicycle-friendly infrastructure. Using these standards, Topeka's bicycle network should generally fulfill six requirements:

- **Integrity:** Topeka's bikeway network should form a coherent system throughout its evolution, linking starting points with destinations, being understandable to its users, and fulfilling a responsibility to convey them continuously on their paths.
- **Directness:** Topeka's bikeway network should offer cyclists as direct a route as possible with minimum detours or misdirection.
- **Safety:** Topeka's bikeway network should maximize bicycle safety, minimize or improve hazardous conditions and barriers, and improve safety for pedestrians and motorists.
- **Comfort:** Most bicyclists should view the network as within their capabilities without mental or physical stress. As the system grows, it will comfortably meet more types of users' needs.
- **Experience:** The Topeka bicycle network should offer its users a pleasant and positive experience that capitalizes on the City's built and natural environments.
- **Feasibility:** The Topeka bicycle network should provide more benefits than costs and should be a wise investment of resources, capable of developing in phases and growing over time.

A phased plan was developed to ensure that it could be carried out as funding became available. A pilot system comprised of approximately 30 miles of adapted streets, 2.7 miles of route-related pathways, and 1.8 miles of trails could be developed for \$2.5 million. Phase I and Phase II of this plan are now complete and Phase III is in the process of being completed. These phases were funded from the Countywide ½ Cent Sales Tax (allocated every other year) three Transportation Alternative Grants, and locally raised funds. Together, these three phases have produced approximately 71.7 miles of bicycle infrastructure. Funding is programmed at \$500,000 in FY 2020 and every other year until 2030. Adding another bicycle connection across the Kansas River will require partnering with KDOT on the US-75 bridge including connections on both sides of the river. Figure 4-1 is a map of the current bicycle and trail system.

Figure 4-1: Bikeways System Map

Topeka Pedestrian Master Plan

In 2016 the City adopted the Topeka Pedestrian Master Plan to make "Topeka...a walkable city where people of all ages and abilities can safely and comfortably travel on foot." The plan outlines the development of the area's pedestrian network that was not planned consistently despite being part of the City since its inception. Following public involvement efforts, **the plan recommended four goals**:

- 1. A Complete Pedestrian Network Connecting All Neighborhoods. Sidewalks improve the safety and comfort of Topekans who walk, and a complete pedestrian network connecting all parts of the city will better facilitate the ability of people to travel by foot, especially to schools, bus stops, community centers, senior centers, parks and trails;
- 2. *Maintained Sidewalks*. Sidewalks are a major infrastructure investment and maintenance can prevent expensive reconstructions. Maintained sidewalks also safely facilitate the mobility of pedestrians including children, the elderly, and people using assistive devices to travel;
- 3. **Safety and Comfort.** Sidewalks are enhanced by features that improve the safety and comfort of pedestrians. Whether it is a crosswalk, a bench, or a curb ramp, the details matter, allowing sidewalks to be friendly to everyone who uses the system; and
- 4. **A Culture of Walking.** The value that a community places on walking plays a role in determining how likely it is someone will travel as a pedestrian. The more perceptions and the physical environment supports and allows walking, the more walking becomes a part of everyday life.

To focus resources on the most important areas for pedestrians, projects were prioritized based on community input. Eighteen focus areas received field inventories to examine the presence and condition of sidewalks, the quality of corner curb ramps, and the need for crosswalks. Proximity to bus routes, "Intensive Care" neighborhoods, parks and trails, public and private elementary and middle schools, and streets without sidewalks were most important. Factors considered less important included proximity to arterial and collector streets, commercial areas, community and senior centers, high density residential areas, major destinations, and "At Risk" neighborhoods. These several "high pedestrian demand" neighborhoods were delineated and their improvement costs were compared with available funding. These neighborhoods were further sorted by whether they contained schools. Groups included:

Group A: High pedestrian demand with schools funding from 2016-2020
Group B: High pedestrian demand without schools funding from 2021-2023
Group C: Low pedestrian demand with schools funding from 2024-2025
Group D: Low pedestrian demand without schools funding beyond 2025
Group E: Consisted of corridors, complete street linkages, and future areas to complete the network to be improved throughout the process connecting different neighborhoods.

The overall pedestrian plan funding goal is 10 years from adoption, or 2025, including approximately 47 miles of sidewalks, 1,800 curb ramps, and 350 crossings. Funding for pedestrian improvements is expected to come from \$7.7 million in the Capital Improvement Program funds, \$9 million in ½ Cent Sales Tax Funds starting in 2020, and \$4.5 million in other local and State grant funds. Upon the complete of the Pedestrian Master Plan, Topeka has begun funding proactive sidewalk repair in the highest priority areas of the city.

The City's focus on implementing the Pedestrian Master Plan includes a goal of lining arterials with sidewalks to promote transportation between areas of the City and into the County which will space sidewalks at approximately 1-mile distances across the City. This includes the reconstruction of some arterials that extend into the County which has begun creating the backbone of an MPA-wide active transportation network, as seen south on Wanamaker Street.

Overall, the hope is to provide a bicycle and pedestrian system that provides safe routes to schools, parks, jobs, shopping, and service. Figure 4-2 illustrates the Pedestrian Demand areas of the MPA.

Figure 4-2: Pedestrian Demand Map

Pedestrian Infrastructure

Overall, about 40% of City streets and most rural subdivisions lack sidewalks. Within the City itself, approximately 70% of major thoroughfares have sidewalks on both sides of the street, which will increase to 78% by 2031 as current road reconstruction projects add sidewalks. The goal for major thoroughfares is to have 95% built with sidewalks on both sides. Meanwhile, approximately 48% of all streets have sidewalks on both sides, which should increase to 51% with currently planned projects by 2025.

Regarding the number of people with access to sidewalks, about 116,353 people or 69.2% of the population has access to sidewalks on their block. Within Environmental Justice (EJ) areas (explained further on page 39), 72,073 or 83.4% have a sidewalk on their block. While these numbers do not speak to the coherency, distribution, or ease of use of the sidewalk system, it does indicate that many people can reach sidewalks.

Bicycle Infrastructure

The MPA contains approximately 62.7 miles of bicycle infrastructure and 49.3 miles of trails. To determine access to the bicycle system, buffers of ¼ and ½ miles are used to determine proximity to the on-street bicycle system and to trails. For the purposes of this section, trails are considered part of the bicycle system. Within the MPA, approximately 71,200 residents are within ¼ mile or a 3-4 minute bike ride from the bicycle system. This amounts to 42% of the MPA's population. When the distance is increased to ½ mile or a 6-8 minute bike ride, approximately 105,100 people are within range of bicycle facilities. This amounts to 63% of the MPA's population. EJ areas tend to have better access to the bicycle system. 58% of EJ areas are within ¼ mile of a bike route or trail and 82% of EJ areas are within a ½ mile.

Within the MPA, approximately 27,200 residents are within ¼ mile or a 3-4 minute bike ride from a trail. This amounts to 16% of the MPA's population. When the distance is increased to ½ mile or a 6-8 minute bike ride, approximately 54,400 people are within range of a trail. This amounts to 32% of the MPA's population. EJ areas tend to have better access to trails. 23% of EJ areas are within ¼ mile of a bike route or trail and 45% of EJ areas are within a ½ mile.

This analysis suggests that there are no outstanding EJ issues regarding sidewalks, trails, or the bicycle system as many EJ areas tend to be older and denser. While sidewalk facilities in historic areas tend to be older, and therefore require more improvements, they do however have better overall coverage. Overall, the current pedestrian and bikeways growth rate will continue to have a positive effect on EJ populations. Figures 4-3, 4-4 and 4-5 are tables from the Topeka Pedestrian Master Plan that show the current percentage of the population which has access to pedestrian and/or bikeways facilities within the Metropolitan Planning Area. Figure 4-6 displays a map of the current bikeways system with a $\frac{1}{4}$ - mile buffer:

Figure 4-3: Sidewalk Coverage

	No.	Pct.
Total Population with Sidewalks on Block	116,353	69.2%
EJ Population with Sidewalks on Block	72,073	83.4%

Figure 4-4: Distance from the Bicycle System

	Total Population		EJ	EJ Population	
	No.	Pct.	No.	Pct.	
¼ mile of bicycle System	71,184	42.3%	50,406	58.4%	
½ mile of bicycle system	105,076	62.5%	71,110	82.3%	

Figure 4-5: Distance from Trails

	Total Population		EJ Population	
	No.	Pct.	No.	Pct.
¼ mile of trail	27,168	16.1%	19,815	22.9%
½ mile of trail	54,353	32.3%	39,231	45.4%

Topeka Pedestrian Master Plan, adopted 2016

Exisitng Bikeways Existing Trails

1/4 Mile Buffer around Existing Bikeways & Trails

Target 2022 Bicycle and Pedestrian Infrastructure additions: 5% Increase in Total MPA population have access to sidewalks (from 69%-74%): 5% Increase in Total MPA population have access (within ¼ -mile) to Bike System (from 42.3% to 47.3%)

<u>Performance Measures (5): System Reliability/Congestion Reduction: Transit- Goal:</u> <u>Maintain Existing Infrastructure</u>

Public Transit Use and Efficiency

Annual Ridership

After the record ridership of 1.8 million annual trips in 2008, the Topeka Metropolitan Transit Authority (dba Topeka Metro) ridership dropped off to around 1.12 million annually by 2012. Ridership had gradually increased until if reach 1.3 million annually in 2019. Due to travel restrictions associated with the COVID-19 pandemic, 2020 ridership will be significantly lower.

Topeka Metro continues the reduced income pass program offering reduced fares for those qualifying to lowincome services as well as the Freedom Pass program offering no cost rides on fixed route buses for those who qualify for paratransit service. Together, over one-half million rides were taken in 2019 under these programs.

Topeka Metro continues with the partnerships with USD 501, with Washburn University, and with the City of Topeka to provide bulk passes to their students and employees.

Paratransit service had been on a strong upward trend in the last 2 years after falling since 2011 when fares were increased across the entire system and Topeka Metro reduced the service area from all areas within the City limits down to the required ¾ mile buffer around a fixed transit route. After a low in early 2018, paratransit ridership has steadily increased with the strongest growth in riders using mobility devices. Since then, the average percent of paratransit trips taken by riders using mobility devices has risen from a low of 32% to a consistent average of 41-44% by the end of 2019.

On-Time Performance (OTP)

In December 2019, Topeka Metro installed Automatic Vehicle Location (AVL) technology in all fixed route buses. This allows OTP to be audited from a remote computer. The ongoing quarterly OTP sampling has been modified to count occurrences where buses return to Quincy Street Station, Topeka Metro's primary transfer point, later the 5 minutes after the scheduled arrival time. This measure is designed to account for arrivals that would not allow riders to make transfers to other buses and continue their trip in a timely manner. In the first three quarters of 2020, Topeka Metro achieved an OTP percentage of greater than 99%. The unusually light traffic during the stay at home orders and lack of school-zone slowdowns due to the COVID-19 pandemic accounted for low traffic congestion levels. In the future, Topeka Metro will continue to target 90% or better as the goal for OTP performance.

Service Coverage

The City of Topeka has good coverage from fixed route public transit services. The 2010 US Census places the total population of the City of Topeka at 127,473. Overall, approximately 93,510 residents live within a ¼ mile from a bus route, or about 73.4% of Topeka's 2010 population. Figure 5-2 shows the ¼ mile buffer distance from the current bus route system.

Approximately 108,673 of Topeka's residents live within a ½ mile of a fixed transit route. This means that TMTA's current fixed route transit network's ½ mile transit-shed includes about 85.3% of Topeka's population.

1/4 Mile Buffer around Existing Bus Routes

Environmental Justice Populations

Because the MTPO plans for transportation and mobility for all members of the region, it is important to assess the proximity of the current public transit system to Environmental Justice (EJ) populations. For EJ analyses, community block groups with the following characteristics are considered EJ areas:

- 1. More than the County average of non-white/Hispanic population (25.2%) 2015 American Community Survey (ACS).
- 2. More than 20% of families in poverty –2015 ACS.
- 3. More than 50% of the population in Low-Moderate Income (LMI) Households 2015 HUD standards.

Using 2010 Census block data, the number and percentage of people living within a ¼ and within a ½ mile of bus routes could be identified for the entire MPA. This was compared to the number and percentage of people living within a ¼ and within a ½ mile of bus routes for EJ areas to further evaluate transit coverage (Figure 5-2).

	Total Population	EJ Population
Persons Within ¼ mile of bus routes	93,510	68,974
Persons Within ½ mile of bus routes	108,673	76,929
Total Population within Areas	168,235	86,371
Percent of Population within ¼ of Bus Routes	55.6%	79.9%
Percent of Population within ½ of Bus Routes	64.6%	89.1%

Figure 5-2: Percentage of Population Within ¼ and ½ mile of Fixed Bus Routes

Source: 2010 Census Block Data

Within the MPA, approximately 57% of the population can walk 5 minutes to reach a fixed bus route. Meanwhile, approximately 80% of those living within EJ areas can reach a bus route in 5 minutes. When the range is increased to a 10-minute walk, approximately 66 percent of the population can reach a bus route, compared to 89% of those living within EJ areas.

The better coverage of bus routes in EJ areas represents the fact that EJ areas tend to be in older parts of the City. In addition, many higher income individuals tend to live further from the City center. The fact that public transit routes serve EJ areas better than non-EJ areas is fitting as public transit drastically improves mobility for low-income populations who may not be able to afford a car. EJ areas that do not have access to fixed-route bus service within a 10-minute walk include areas to the south (such as Montara), areas to the northwest (primarily industrial land), areas to the northeast, and around Lake Shawnee.

Target for Transit On-Time Performance: 90% or greater Target for Transit Service Availability: 70% of all residents of the City of Topeka live within ¼ mile of a fixed route.

TIP Amendment Process

The TIP amendment process described below details procedures that are to be used to update an existing approved TIP. A key element of the amendment process is to assure funding balances are maintained in order to maintain fiscal constraint.
TIP Administrative Revisions

The following actions are eligible as administrative revisions to the TIP:

- Obvious minor data entry errors.
- Splitting or combining projects, provided there is no change in scope or cost as a result of the split or combining.
- Changes or clarifying elements of a project description (with no change in funding or scope).
- Programming additional funding limited to the lesser of 25% of the total project cost or \$5 million (of the originally approved funding amount).
- Project cost decreases.
- Change in program year of project within the first four (4) years of the fiscally constrained TIP.
- Change in sources of federal funds.
- Programming federal funds for Advance Construction Conversion (AC) or changing from already obligated AC regular federal funds.

The administrative revisions process consists of notification from the MTPO to all other involved parties, KDOT, FTA and FHWA, as well as to the MTPO advisory bodies. The MTPO must verify with KDOT that funds are available for the cost estimate changes. Any changes made through an administrative revision will be incorporated with the next TIP Amendment.

Major TIP Amendments

Major amendments to the TIP include the following:

- Addition or deletion of a project or work phase.
- Shifting projects into or out of the fiscally constrained portion of the TIP.
- Changes in total project cost by more than 25% of the original cost or \$5 million.
- Any changes to the scope of a project.

The major amendment process consists of the following steps:

- Placing the amendment on the agenda for discussion at the TAC and release for public comment.
- Advertising on the MTPO web site for a 14-day public comment period and utilizing appropriate public participation techniques.
- Following the 14-day required public comment period, all comments will receive a response, either individually or in summary form.
- The amendment is then returned to the TAC and a request is made for the amendment to be sent to the MTPO Policy Board for final approval.
- After final approval is given by the Policy Board the MTPO staff forwards the amendment to KDOT for approval and inclusion in the STIP and ultimately approved by the OneDOT.

The MTPO must verify from KDOT and the local jurisdiction sponsor that funds are available for the cost estimate changes if these changes are not offset by cost reductions or shifting of other projects. The MTPO is responsible for notification to KDOT and OneDOT of action taken and assuring that the major amendment process and public notification procedures have been followed.

Status of Major Projects from previous TIP

As per federal regulations, MPOs must list any major projects from the previous TIP that were implemented and identify projects with significant delays. The following provides a definition of each of these terms for the MTPO.

Roadway Projects (including intersections and bridges)

The major roadway projects implemented from the previous TIP will include projects located on a roadway classified by the MTPO as a collector or higher, with construction costs of at least \$2.0 million and with at least one of the following attributes:

- Designed to increase roadway capacity and decrease traffic congestion.
- Designed to significantly improve safety.
- Designed to replace aging infrastructure and bring it up to current standards.
- Result in significant delay and/or detour.

Public Transit Facilities and Services Projects

The major public transit projects implemented from the previous TIP will include projects that have a total project cost of at least \$1.0 million and meet at least one of the following criteria:

- Acquisition of three or more new transit vehicles.
- Addition of new operations and/or maintenance buildings or expansion of existing buildings.
- Initiation of new transit service or expansion of existing transit services into territory not previously served by transit.

Bikeway and Pedestrian Facilities Projects

The major bikeway and pedestrian projects implemented from the previous TIP will include projects that meet at least one of the following criteria:

- Total project cost of at least \$500,000
- Construction of new bikeway or pedestrian facility (or extension of existing facility) into a location where a bicycle/pedestrian facility did not exist before

Significant Delay

The MTPO defines significant delay as a project which has been delayed by two years or more from the year it was first programmed in the TIP.

Status of Projects from Previous 2017-2021 TIP

Since the last TIP was approved in October of 2017 progress has been made on several major transportation projects in the region. These improvements are listed below.

Transportation Enhancement Projects: <u>Com = complete;</u> C.O. = Carryover/Under Const.

- Bikeways Phase III Implementation (Com.)
- Deer Creek Trail Extension (C.O.)
- SRTS: Phase II Quincy Elem. School (Com.)

Major Roadway & Bridge Improvements:

- SW Arvonia Place/Huntoon/I-470 Ramps: Roadway repair/replace(Com.)
- SW Wanamaker Rd./SW Huntoon\I-470 Ramps: Intersection Improvements (Com.)
- SW Gage Blvd.: Emland Dr. to I-70 EB Exit ramp; Extend two-way left turn lanes (Com.)
- Bridge Repair: #240 (KTA) located 8.3 mi. N. of the Osage Co. line (Com.)
- Bridge Repair: #046 located 0.21 mi. NW of 10th St. (Com.)
- Intersection of 29th & McClure (Com.)
- SW 10th Ave. : Fairlawn to SW Wanamaker Rd.: Roadway widening(Com.)
- SE California Ave: 37th to 45th Streets: Roadway widening (C.O.)
- 12th St.: Gage to Kansas: Roadway repair and replace (C.O.)
- NW Tyler St.: Lyman to Beverly: Roadway widening (C.O.)
- SE 29th Bridge over Deer Creek: Bridge replacement (C.O.)
- US-24 Hwy.: Topeka E. to the County Line: Pavement replacement (C.O.)
- I-70/Polk/Quincy Viaduct Approach & Roadway/I-70 over BNSFRR Spur Turntable (C.O.)
- I-470 from I-70 to KTA Roadway Widening (C.O.)
- I-470 from I-70 to KTA Guardrail Safety Improvements (Com.)
- 089-279 & 280 (NB) US75 over 46th St. SN. Co.: Bridge Resurfacing (Com.)
- US-75 Begin. 7mi. S. of NW 62nd St. Thence N. to SN./JA Co. line: Resurfacing (C.O.)
- Bridge Repair: #111 112 (Wakarusa River) on US-75 (Com.)
- Bridge Repair: #161 located at E. junction I-70/US-75 in SN Co. (Com.)
- Bridge Repair: #275 (C.O.)
- US-24 from E. City Lim. Of Silver Lake to 400ft. E. of US24/Countryside Rd Int. Mill & Ovrly. (C.O.)
- S. Kansas Ave. 1st to 6th St. (C.O.)
- 17th St. MacVicar to I-470 Interchange (C.O.)
- I-70/Polk/Quincy Viaduct Approach & Roadway (C.O.) Project Selected as an IKE project in 2020. Currently in the Engineering phase, construction phase to follow, likely on a five-year horizon.

Significant Delay Projects:

• K-4; North end of Kansas River Bridge, N. and NE. to Shawnee/Jeff. Co. line; construct 2-lanes of a 4-lane freeway section, including the addition of 2 loop ramps at US-24 and a future proposed interchange @ 35th St. (PE on hold waiting on funding)

Environmental Justice Review

The Environmental Protection Agency defines Environmental Justice (EJ) as the "fair treatment for people of all races, cultures, and incomes, regarding the development of environmental laws, regulations, and policies." The Federal Highway Administration considers three fundamental environmental justice principles:

- To avoid, minimize, or mitigate disproportionately high and adverse human health and environmental effects, including social and economic effects, on minority populations and low-income populations.
- To ensure the full and fair participation by all potentially affected communities in the transportation decision-making process.
- To prevent the denial of, reduction in, or significant delay in the receipt of benefits by minority and low-income populations.

Title VI Nondiscrimination Law

Title VI of the Civil Rights Act of 1964 prohibits discrimination by recipients of Federal financial assistance on the basis of race, color, and national origin, including matters related to language access for limited English proficient (LEP) persons. Under USDOT's Title VI regulations, as a recipient of USDOT financial assistance, the recipient is prohibited from, among other things, using "criteria or methods of administering your program which have the effect of subjecting individuals to discrimination based on their race, color, or national origin." For example, neutral policies or practices that result in discriminatory effects or disparate impacts violate USDOT's Title VI regulations, unless it can be shown the policies or practices are justified and there is no less discriminatory alternative. In addition, Title VI and USDOT regulations prohibit intentionally discriminating against people on the basis of race, color, and national origin.

The overlap between the statutory obligation placed on Federal agencies under Title VI to ensure nondiscrimination in Federally-assisted programs administered by State and local entities, and the administrative directive of Federal agencies under the Executive Order to address disproportionately high and adverse impacts of Federal activities on EJ populations explain why Title VI and Environmental Justice are often paired. The clear objective of the Executive Order and Presidential Memorandum accompanying the Executive Order is to ensure that Federal agencies promote and enforce nondiscrimination as one way of achieving the overarching objective of Environmental Justice – a fair distribution of the benefits or burdens associated with Federal programs, policies, and activities.

How Do Title VI and EJ Work Together?

Environmental Justice and Title VI are not new concerns. The Presidential Memorandum accompanying EO 12898 identified Title VI of the Civil Rights Act of 1964 as one of several Federal laws that must be applied "as an important part of...efforts to prevent minority communities and low-income communities from being subject to disproportionately high and adverse environmental effects." According to the U.S. Department of Justice, "...the core tenet of environmental justice – that development and urban renewal benefitting a community as a whole not be unjustifiably purchased through the disproportionate allocation of its adverse environmental and health burdens on the community's minorities – flows directly from the underlying principle of Title VI itself."¹

Furthermore, Federal law requires that MPOs ensure that individuals not be excluded from participating in, denied the benefit of, or subjected to discrimination under any program or activity receiving Federal funding on the basis of race, color, national origin, age, sex, or disability. Environmental Justice Executive Order 12898, Federal Actions to Address Environmental Justice (EJ) in Minority and Low-Income Populations, calls for the identification and addressing of disproportionately high and adverse human health or environmental effects of its programs, policies and activities on minority and low-income populations.

The intent of the Executive Order and the US Department of Transportation's EJ guidance is to ensure that communities of concern, defined as minority populations and low-income populations, are included in the transportation planning process, and to ensure that they may benefit equally from the transportation system without shouldering a disproportionate share of its burdens.

Under the USDOT Order, adverse effect means:

"the totality of significant individual or cumulative human health or environmental effects, including interrelated social and economic effects, which may include, but are not limited to: bodily impairment, infirmity, illness, or death; air, noise, and water pollution and soil contamination; destruction or disruption of man-made or natural resources; destruction or diminution of aesthetic values; destruction or disruption of the availability of public and private

¹ Title VI Legal Manual, U.S. Dept. of Justice Civil Rights Division (2001), page 59.

facilities and services; vibration; adverse employment effects; displacement of persons, businesses, farms, or non-profit organizations; increased traffic congestion, isolation, exclusion or separation of individuals within a given community or from the broader community; and the denial of, reduction in, or significant delay in the receipt of benefits of DOT programs, policies, or activities."

An EJ analysis also includes a determination of whether the activity will result in a **"disproportionately high and adverse effect on human health or the environment,"** which is defined in the USDOT Order as:

"an adverse effect that:

- 1. Is predominantly borne by a minority population and/or a low-income population, or
- 2. Will be suffered by the minority population and/or low-income population and is appreciably more sever or greater in magnitude than the adverse effect that will be suffered by the non-minority population and/or non-low-income population"

Once the EJ populations have been identified, we compare the burdens of the activity experienced by EJ populations with those experienced by non-EJ populations. Similarly, we compare the activity's benefits experienced by EJ populations as compared to non-EJ populations.

MTPO EJ Analysis Process

For the purposes of this EJ review the areas considered as EJ zones are parts of Topeka that are covered by Neighborhood Improvement Associations (NIAs) and those block groups in which more that 50 percent of households have Low-Moderate Incomes. Low-Moderate Incomes as defined by HUD are households with incomes that are less than 80 percent of the median income for the City of Topeka. These areas also have high proportions of minority persons compared to other areas of the City and County.

In order for the MTPO to consider the EJ aspects of the projects identified in the 2021-2024 TIP, the locations of the roadway and bridge projects, and the areas of the region that have a large percentage of low-income and/or minority populations (EJ areas) were mapped (Figure 1). The table below shows the number of total 2021-2024 TIP projects along with their costs. This table also shows the percentage of projects that are in the EJ zones. While there may be some displacement of businesses or residences with the realignment of the Polk/Quincy Viaduct, it is not deemed by the MTPO to have a disproportionate effect on the low-income or minority populations that reside in that area. Extensive public participation and alternative realignment solutions were reviewed during the preliminary engineering phase of this project.

Years	Number of Projects or Project Phases*	Total Cost	Number of Projects in EJ Zones	Percentage of Projects in EJ Zones	Total Cost of Projects or in EJ Zones	Percentage Cost of Projects in EJ Zones
2021- 2024	35	\$131,515,543	11	31.4%	\$27,995,259	21.3%

Figure 1: Environmental Justice Review Table for Highway, Bridge and Safety TIP Projects

*Excludes annual Complete Streets; Safety Projects; ADA curb/ramp & traffic signal projects where locations are determined annually.

Of the projects listed in the 2021-2024 TIP, none appear to have a disproportionate burden-to-benefit ratio between EJ population areas and non-EJ population areas. One of the highest impact projects (12th street from Kansas Ave. to Gage) is equally split between the EJ and non-EJ areas. This project utilized extensive public outreach and should have positive effects along its entire route. Efforts were made to minimize any hardships or burdens on nearby residents and businesses.

The following map in figure-2 shows the locations of TIP projects as well as an overlay of the Environmental Justice Zones within the MTPO area.

MTPO_TIP_2021_2024_projects_EJ_Zones8x11a .mxd 08/04/20

2021-2024 Roadway and Bridge Projects from EJ Map

Num	Project Num.	Route	Location	Work	Total Project Cost

<u>TIP Number (#) Explanation</u>

Another important item in the TIP tables is the unique identification number given to each road and bridge project. The addition of TIP project numbers allows the sorting of all TIP projects into an index sheet. The index arranges the entries by project rather than by year, route and location like the main TIP table does. This index sheet just gives the reader an easy-to-understand list of the projects that clearly shows how large multi-year projects are scheduled. The TIP project number is also designed to provide the reader with descriptive project information just by reading the number. The TIP # coding is explained below.

Coding Explanation

- First Part Sponsoring Agency
 - 1= KDOT
 2= Shawnee County
 3= City of Topeka
 4= Kansas Turnpike Authority
 5= Other Cities in Shawnee County
 6= Other Local Governments
 7= Topeka Metropolitan Transit Authority
 8= Paratransit Agencies
- Second Part Project Start Year

This is a two-digit number indicating what year the project started implementation and is typically the design stage year (e.g., 05 would indicate a project that entered the design stage in 2005).

Third Part – Project Number

This is a two-digit number that identifies specific projects from each sponsor in each year. For sponsors that have multiple projects in each year of the TIP this is a number that distinguishes the projects from one another (e.g., 01 indicates that this is project number one from this project sponsor in this year).

Fourth Part – Type of Project

This is a single digit that indicates whether this project is a bridge, roadway improvement or some other type of project.

1= Highway/Roadway Improvement 2= Intersection Improvement 3= Bridge 4= Transit 5= Paratransit 6= Enhancement 7= Other

<u>TIP # Example</u>

2-20-07-1 This TIP # indicates that this is a Shawnee County project started in 2020 that is the seventh County project for that year and that it is a roadway project.

Roadway Project Tables

The following are the Roadway project tables, followed by the Topeka Metro Transit Authority (TMTA) funding tables for 2020 through 2024. These projects are subject to amendment throughout the four-years covered by this document. Projects listed as "Completed" remain in this document because for KDOT, projects that are completed may still be open with regards to encumbered funds, even though the project is physically finished. It is not until KDOT lists a project as "Closed" that the project is removed from the document. City and County projects are generally removed from the TIP when they are completed, particularly when they are not utilizing Federal funding.

"Regionally Significant" – Definition for MTPO

Generally, projects that are part of MPA's mobility system and that have impacts that extend beyond the area in which they are located are considered to be *regionally significant*. People throughout the MPA use these facilities, and people living in various parts of the region are impacted by these facilities. For example, a freeway interchange is regionally significant because it helps bring people and business to our area and impacts our region as a whole (not just the people living within a mile of the interchange). In the case of roadways it seems simple enough to say that all roads that have mobility rather than property access as their primary function are regionally significant. By this definition, all arterial and higher classification roads are regionally significant and all roadways below an arterial classification are not regionally significant. However, collector streets at times perform both functions equally well, and it may be unclear as to which collectors do a more mobility duty and which ones are primarily for property access. There may also be some cases where major activity centers are connected to collectors and, even though those collectors seem to provide mostly property access, the volume of traffic using the road to access a major activity center encourages residents to think of those roadways as regionally significant.

The graphic included in this section depicts the relationship of mobility and land access as the function for each major roadway classification. It is clear looking at this graph that arterials have a primary mobility purpose, and because of that they are regionally significant. It is also clear that local streets have a primary service of providing access to adjacent land. These streets often connect to house lot driveways and alleys in predominantly residential areas. They are not regionally significant. The difficult thing for a region to decide is exactly where in the collector category the line between being and not being regionally significant is drawn.

Our goal is to define the MTPO's definition of regionally significant that works for our region and our MTPO's activities. This definition will be used by the MTPO staff and the various organizations that submit projects for the TIP.

What the US Department of Transportation says in 23CFR Part 450 Subpart A, H and D

Regionally significant project means a project (other than projects that may be grouped in the STIP/TIP pursuant to Subsection 450.216(j) and Subsection 450.324(f)) that is on a facility which serves regional transportation needs (such as access to and from the area outside of the region, major activity centers in the region, major planned developments such as new retail malls, sports complexes, etc., or transportation terminals as well as most terminals themselves) and would normally be included in the modeling of a metropolitan area's transportation network, including, as a minimum, all principal arterial highways and all fixed guide way transit facilities that offer a significant alternative to regional highway travel.

Projects that may be grouped under Subsection 450.216 and 450.324, and therefore are not regionally significant, include but are not limited to the following:

- utility installations along or across a transportation facility;
- construction of certain bicycle and pedestrian facilities;
- activities in the State's highway safety plan;
- landscaping;
- installation of fencing, signs, pavement markings, small passenger shelters, traffic signals, and railroad warning devices where no substantial land acquisition or traffic disruption will occur;
- emergency repairs;
- improvements to rest areas and weigh stations; and
- bus and rail car rehabilitation alterations to facilities and vehicles to make them accessible to persons with disabilities and elderly persons.

<u>What the Topeka –Shawnee County Regional Transportation Plan says in Appendix 1 -</u> <u>Glossary</u>

Major Traffic Thoroughfares

This is a term used in the City of Topeka/Shawnee County Zoning Code. This term is defined as Urban Area roads with a functional classification of Urban Collector or higher. This term is also defined as Rural Area roads with a functional classification of Rural Major Collector or higher. The functional classification of roadways in the region is determined by the designation of roadway classifications shown in the Metropolitan Transportation Plan (MTP) and is approved by the Federal Highway Administration (FHWA) in conjunction with the Kansas Department of Transportation (KDOT). The purpose of having this term in the Zoning Code is to ensure that certain large traffic generators are located along roadways that can handle the traffic from those developments.

Major Activity Centers

These locations are places that have significant amounts of economic and/or social activity and generate large volumes of traffic on an hourly or daily basis. These locations include major employment centers, such as the Downtown Topeka Central Business District and large factories. Major shopping areas, such as the Wanamaker Corridor, that attract many shoppers as well as workers are also included. Business parks and industrial parks are included along with individual businesses that employ a hundred or more workers. Employers with one hundred or more employees are typically easy to identify from commercially available databases, and businesses with this many employees typically have some noticeable impact on adjacent streets assuming most of their employees arrive or leave work at about the same time. Generally, if a location has one hundred or more employees or traffic generation traits that trigger a traffic impact analysis to be done, it is a major activity center. Other commercial sites that are smaller and have fewer employees (e.g., convenience store, gas station, etc.) may have some noticeable traffic impacts, but these locations by themselves are not major activity centers. Major social and recreation areas, such as stadiums and large parks, are also major activity centers with regional impacts.

What the MTPO has decided to consider in developing a working definition of "Regionally Significant" for planning transportation infrastructure and services in the Topeka Metropolitan Area

Regionally Significant Roadways

All projects designed to add capacity to roadway segments greater than one mile in length that are designated as regionally significant must be listed in the Transportation Improvement Program (TIP). All projects using Federal funding in the region must also be listed in the TIP.

At a minimum these roadways are defined as Urban Area and Rural Area roads with a functional classification of Minor Arterial or higher. The functional classification of roadways in the region is determined by the designation of roadway classifications shown in the MTPO approved Metropolitan Transportation Plan, and on the Functional Classification Map approved by the MTPO and the Federal Highway Administration (FHWA) in conjunction with the Kansas Department of Transportation (KDOT).

Additional roadway segments classified as Collectors may also be added by MTPO approval to the list of roads defined as "regionally significant" if one or more of the following criteria are met:

- Road segment is part of a State Highway route and/or part of the State maintained highway system.
- Road segment serves a major activity center in the region and is expected to have high peak hour traffic counts.
- Road segment serves to connect a major activity site to a higher classification road.
- Road segment serves to connect two higher classification roads.
- Road segment serves a "regionally significant" transportation facility.
- Road segment is located more than a mile away from a higher classification road.
- Road segment is on a section line .
- Road segment is the highest classification road in a township or city.

•

All roadway segments designated as "regionally significant" and located in the Urbanized Area of the region will be included in the regional traffic demand model used by the MTPO. Roadway segments designated as

"regionally significant" and located outside of the region's Urbanized Area may be included in the regional traffic demand model if they are located in the area covered by the model network approved by the MTPO.

Regionally Significant Transit Facilities and Services Facilities

At a minimum these facilities are defined as maintenance and operations facilities (dispatch office, garage, stations, etc.) serving public transit and/or paratransit operations that operate throughout the Topeka Urbanized Area and typically operate for at least ten hours per day. Major transfer points with public transit amenities (bus shelters, posted schedules, etc.) may also be regionally significant locations. Most regionally significant transit facilities are expected to be located in the Urbanized Area. However, some regionally significant facilities may be located outside of the Urbanized Area if those facilities serve regionally significant public transit operations.

Services

At a minimum these services are defined as open to the public inter-city passenger services or common carrier freight operations that connect the Topeka Metropolitan Area to other regions around the country and operate for a minimum of ten hours per day. Services that connect the Topeka area to international destinations and markets are considered to be regionally significant. Private fleet freight operations should also be regionally significant if the private fleet operator has a distribution center or large terminal in the region. Any transportation facilities or services utilizing Federal funds are also considered to be regionally significant.

Regionally significant public transit facilities and services must be included in the Regional Transportation Plan and related public transit system planning documents. All projects designed to add capacity to public transit routes and services that are designated as regionally significant must be listed in the Transportation Improvement Program (TIP). All projects using USDOT funding in the region must also be listed in the TIP.

Regionally Significant Transportation Facilities: Non-Motorized Modes

The trail system depicted in the MTPO approved regional trails plan should be considered regionally significant. This system is interconnected and provides mobility via non-motorized transportation to areas throughout the region. Other additional trail links that provide connections to trails in other regions may also be considered regionally significant if approved by the MTPO.

Bikeways including shared use paths, bike lanes, and bike routes should also be considered regionally significant if the roadway in the same right-of-way or the nearest parallel roadway is designated as regionally significant.

Sidewalks and other pedestrian facilities should be considered regionally significant if the roadway in the same right-of-way or the nearest parallel roadway is designated as regionally significant.

Regionally Significant Transportation Rail Facilities and Services include all passenger and freight modes.

Functional Classification of Roads

For nomenclature purposes, roadways that provide a high level of mobility are called "Arterials"; those that provide a high level of accessibility are called "Locals"; and those that provide a more balanced blend of mobility and access are called "Collectors."

This relationship between mobility and land access, as well as how Principal Arterials, Collectors and Local Roads proportionally serve these two functions, is illustrated in Figure 3-1. Arterials provide mostly mobility; Locals provide mostly land access; and Collectors strike a balance between mobility and land access.

Figure 3-2 is the current Functional Classification of Roads map for all of Shawnee County. All road or bridge projects in the TIP receiving federal funds must be on a road classified as "collector" or above.

Figure 3-1:

While most roadways offer both "access to property" and "travel mobility" services, it is the roadway's primary purpose that defines the classification category to which a given roadway belongs.²

² The use of the term "Local" roadway in the context of functional classification is separate from the use of the term in a jurisdictional context. While it is true that roadways functionally classified as "Local" are often under the jurisdiction of a "local" entity (i.e., incorporated city), Local Roads are not always under local jurisdiction. Other roadway classifications, including Arterials, may also be under the jurisdiction of a local

Funtional Classification of Roads 2014
